

MedMinder

MedMinder is a command-line application that will keep track of your medication schedule and send reminders as required.

Anthony Mann 2020

Concept:

To provide a simple way to keep track of medications and add reminders for script refills or other Medical needs.

I wanted this app to be easy to use and it has to be secure.

```
-----  
🍌 MedMinder  
A developers Medical Wizard, This CLI application can keep  
track of all your medical information.  
-----
```

```
Please Create a profile  
(Use ↑/↓ arrow keys, press Enter to select)  
▶ Create Profile  
Quit
```

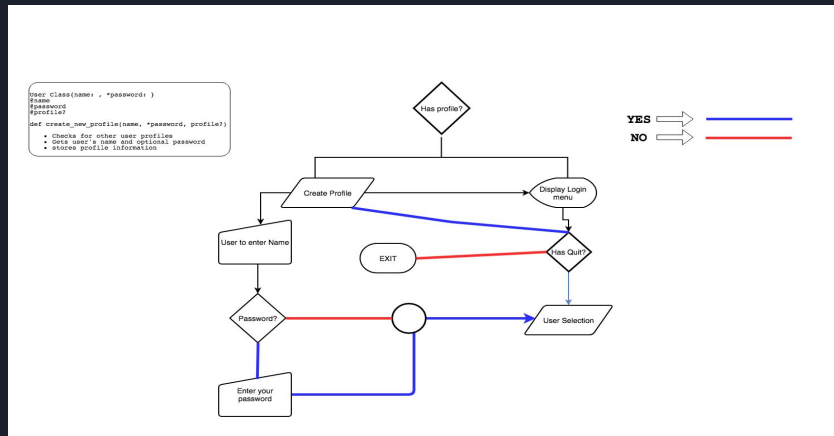

Development Process

This application is far from complete and likely never. - **Yes this is a good thing**

Version Control: Github:

<https://github.com/MrAjMann/MedMinder>

Requires: TTY-Prompt and YAML

MedMinder

A developers Medical Wizard, This CLI application can keep track of all your medical information.

Welcome ANTHONY MANN Please Select your Profile:

Medications

To add your medication/s please Select Add Medication
(Use ↑/↓ arrow keys, press Enter to select)

► Main Menu

Add Medication

Current Medication

Quit

Questions?

A massive THANK YOU to those that help me with getting this application off the ground.

The bugs were weird.
